

To those who say "impossible,
impractical, unrealistic," we say:

CHALLENGE ACCEPTED

We are relentless in our
pursuit of new treatments.
Because patients shouldn't
have to wait for hope.

POCKET PROGRAM

LOOK BEHIND THEIR STONE AND GET IN FRONT OF A SERIOUS CONDITION*

A kidney stone may be a sign of a metabolic stone disease, such as primary hyperoxaluria type 1 (PH1), that can result in progressive renal impairment.^{1,3} So, any unusual presentation among stone formers merits further investigation.¹

Once suspected, confirming PH1 with genetic testing may reduce an often lengthy delay in diagnosis, which may improve the overall outcome.^{4,7}

BEHIND THE
STONE

Consider genetic testing for your patients
when you suspect a metabolic stone disease.¹
